

Task Feature: Close Job

1. Business Problem :Jobs can not be available forever because the system does not know when to stop processing the incoming applications.

2. Feature : Close Job

3. Actor : Recruiter

4. Business Rules :

- **BR-01:** Only authorized recruiters (or company job owners) can close a job.
- **BR-02:** Closing a job updates its status to inactive (**IsActive = false**) and immediately blocks new candidate submissions.
- **BR-03:** Existing applications submitted prior to closing remain intact in their current state (e.g., **Applied**, **UnderReview**) and remain accessible to recruiters.
- **BR-04:** Attempting to apply to a closed job results in an immediate rejection by the system.

5. Data Model :

- **Job Entity:**
 - **IsActive:** Updated from **true** to **false**.
 - **ClosedAt:** Timestamp indicating when the job was closed (**DateTime?**).

6. API Endpoints :

- **Delete** `/api/jobs/{id}`
 - **Role Required:** Recruiter
 - **Response:** `200 OK` (Job status updated to closed)

7. Acceptance Criteria :

- **Scenario 1: Close active job by authorized Recruiter**
 - **Given:** An active job (`IsActive = true`) and an authorized recruiter.
 - **When:** The recruiter submits a request to close the job.
 - **Then:** The job status updates to `IsActive = false`, `ClosedAt` is recorded, and all existing applications remain unchanged.
- **Scenario 2: Apply to a closed job**
 - **Given:** A closed job (`IsActive = false`).
 - **When:** A candidate attempts to submit an application.
 - **Then:** The API rejects the request with a `400 Bad Request` error indicating the job is closed.
- **Scenario 3: Close job by unauthorized user**
 - **Given:** A user without recruiter privileges for this job.
 - **When:** They attempt to close the job.
 - **Then:** The API rejects the request with `403 Forbidden`.
